## LATIHAN 2. DEKLARASI & PENGAKSESAN VARIABEL

Bentuk umum pendeklarasian variabel di java:

<tipe\_data> <nama\_variabel>;

```
Isi variabel nilai = 78
Isi variabel PHI = 3.14
Isi variabel logika = false
Isi variabel Karakter = D
BUILD SUCCESSFUL (total time: 0 seconds)
```

```
// Deklarasi variabel
int nilaiInt;
final double PHI = 3.14; //konstanta uppercase
boolean nilaiLogika;
char nilaiKarakter:
// Memberi nilai ke variabel
nilaiInt = 78:
nilaiLogika = false;
nilaiKarakter = 'D':
// Menampilkan hasil
System.out.println();
System.out.println("Isi variabel nilai = " + nilaiInt);
System.out.println("Isi variabel PHI = " + PHI);
System.out.println("Isi variabel logika = " + nilaiLogika);
System.out.println("Isi variabel Karakter = " + nilaiKarakter);
```

run:

## LATIHAN 3. MEMASUKKAN NILAI DARI KEYBOARD

```
package latihanpbo2.input;
import java.util.Scanner;
  @author Rizki Adam Kurniawan
public class LatihanPBO2Input {
     * &param args the command line arguments
    public static void main(String[] args) {
        // TODO code application logic here
        System.out.print("Masukkan nama anda: ");
        Scanner scanner = new Scanner (System.in);
        String nama = scanner.next();
        System.out.println("Nama anda adalah "+nama);
```
